

Do you have a clear title to the land you farm on, either through ownership, a valid legal agreement or customary law?

Show that the farm:

Has a **formal land title** or contracts (maps, contracts, etc.).

Avoids impact on critical cultural heritage.

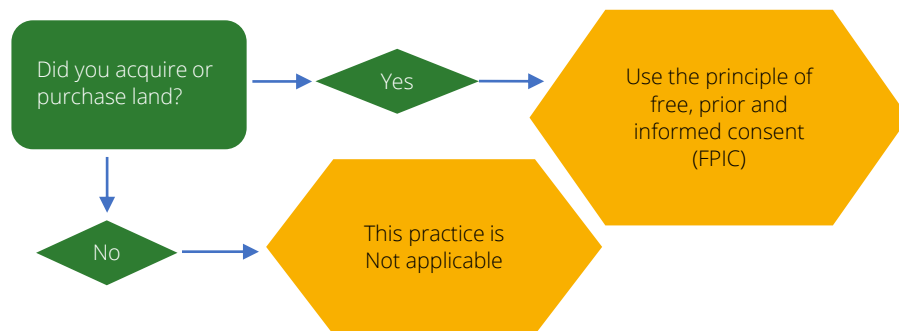

OR can explain rights to occupy, use, access, control, and transfer land that are derived from and **sustained by the customary norms** and practices specific to a community, family, tribe, clan, or other social collective.

Where applicable, during the land acquisition process, did you use Free, Prior and Informed Consent (FPIC) with any affected communities to prevent and resolve land conflicts?

Requirement	Guidance
Provide evidence the farm respects the title to property and land rights, of the individual, local communities and indigenous people and all negotiations, including the use of and transfers, are aligned to the principle of free, prior and informed consent (FPIC)	Deeds or other official document showing rights to operate in countries/regions where land is not typically held through customary or informal tenure are appropriate evidence. If clear maps and well-defined boundaries are not available neighbours and local officials should recognise the right to farm the land.

Do you take any measures to prevent bribery, corruption and fraud, in accordance with relevant legislation?

Business is:

- Done transparently
- Accurately recorded

Committed with zero tolerance for:

- Bribery
- Corruption
- Extortion
- Embezzlement
- Conflict of business interest
- Fraudulent practices

Can you demonstrate how you comply with and keep informed of changes to relevant legislation?

Demonstrate that the business is part of a continued professional development program...

...or a third party certificate that includes regulation compliancy

Have current sources of legal guidance

Do you ensure the safety and quality of your products based on training, education or advice received from a qualified advisor?

Ensuring that Maximum Residue Levels are not exceeded

Records should show that at least one of these activities was implemented	Details of action
Key members of staff have attended appropriate training courses	
Key members of staff are able to demonstrate a good level of awareness of typical safety and quality risks	
Or you have appointed a qualified advisor.	

- Do you have a documented system to manage
- The food safety and quality of your products?
 - The traceability of your products?

Food Safety – Hazards		
Typical Safety Hazards	Key Risks on your farm	Remedial Action
Biological (including infection & Cross contamination)		
Chemical		
Physical		
Cross contamination with allergens		

There is a documented identification and traceability system to show the farm have identified critical control points throughout the crop production process to ensure food safety and quality.

Do you have contracts in place for the purchase of your product which take into consideration a) specification, b) price, c) volume, and d) payment terms and conditions?

Do your contracts have details on	
Contract Item	Details
Specification	
Price	
Volume	
Payment Terms and Conditions	

Contracts are made:

- ☐ At the start of the growing season
- ☐ Based on realistic predictions of the yield
- ☐ With all parties aware of the risks

You can also show membership of a cooperative or similar organization which agrees to purchase your crop

Do you have a system in place to determine the profitability of your farming operations?

Basic Production Record								
Field no.	Crop	Area (acres, hectares)	Total Yield (tons/bags)	Yield per acre/hectare	Cost of inputs, labor	Income	Profit	Remarks

Do you keep stock inventory control of fixed assets and farm inputs?

Farm inventory list of assets

Asset	Year of Purchase	Purchase Price	Expected Lifetime
Size of land use for agriculture			
Stocks and farm supplies			
Vehicles, machinery and equipment			
Inputs (seed, fertilizer, etc.)			

Did you assess:

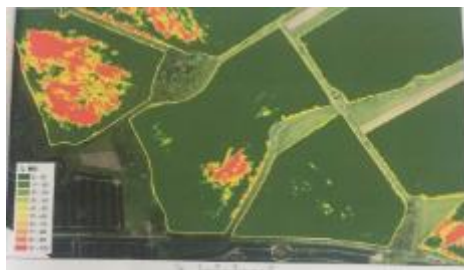

- The suitability of your land for its current and planned activities?
- The impact these activities may have on the environment and wider community?

The assessment of land suitability can address the following criteria

Historical and current land use	
Legal requirements	
Potential sources of off-farm contamination	
Water quantity, quality and availability	
Soil characteristics	
Crop suitability	
Climate change	
Employment and labour rights	

The assessment of impact of activities on the land can include this:

Air, water and soil pollution	
Biodiversity, including HCV and HCS areas	
Rare, threatened and endangered species	
Land and natural resource use rights	
Tenure and conflicts	
Historical and archaeological sites of interest	
Climate change	
Other possible impacts on local communities	

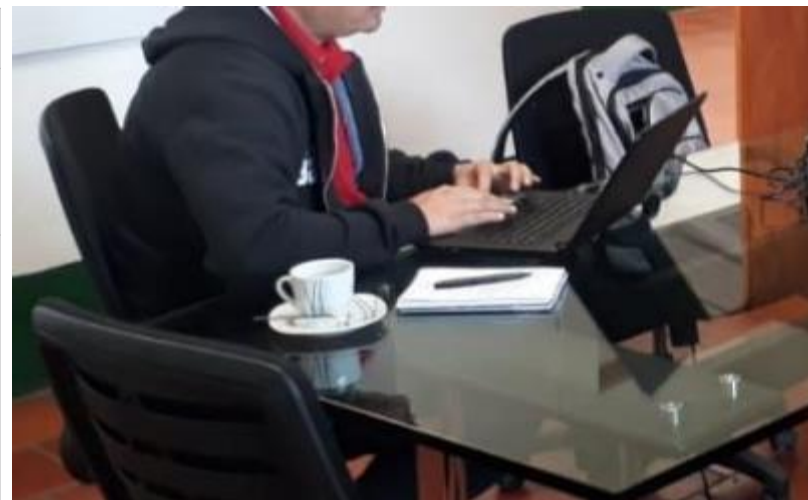

Have you:

- Addressed all the relevant risks and opportunities identified from the assessment?
- Secured the long-term viability of your business?

The farm management is able to work with external and internal partners to mitigate risks to the farm and the community. There is an investment plan and annual accounting to ensure financial viability of the business. The farmer can describe all potential risks for the land/crops and efforts to mitigate them.

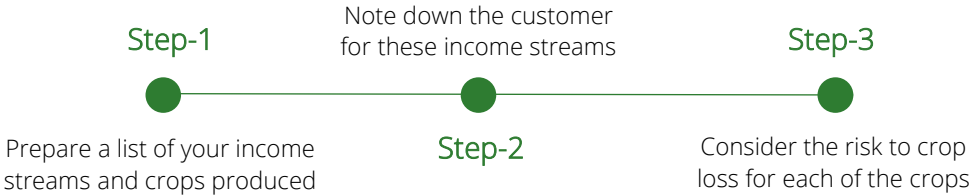

Example template for a business plan

An approach to optimize sustainable yields		Strategy for crop selection	
Approach to optimize input efficiency		Market strategy	

Risk Assessment

Is the (limited) number of income streams and customers as risk for your business?

EXAMPLE of a risk and opportunity analysis	
Description of the risk	Description of opportunity
Low Market Prices	▪ Diversify crops ▪ Invest in storage capacity or processing ▪ Research other possible sources of income then agriculture
Customer out of business or changes supplier	▪ Diversify customers ▪ Direct sales to consumers
Crop Failure or Disease breakout	▪ Diversify crops ▪ Insurance

Do you communicate openly with the community in order to inform them of and address any concerns raised by them over your farming operations?

Are you able to show that:

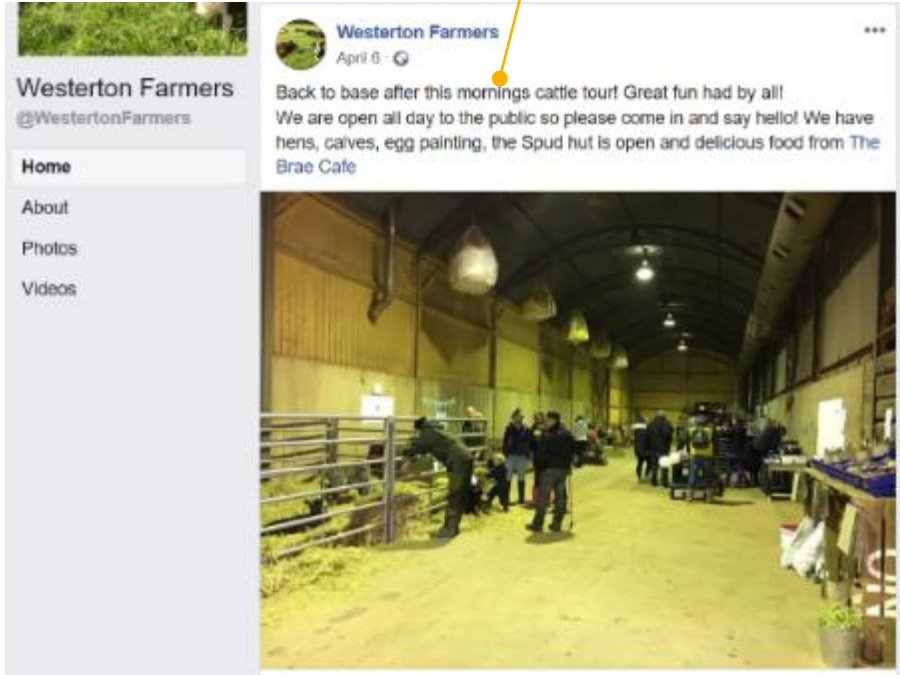

You communicate with neighbours and local communities to inform them of planned activities that may affect them

You have a process in place to deal with any grievances.

Activities that might affect the community include:
generation of noise;
creation of dust;
increased traffic

Building positive relationships with the community is invaluable

Where applicable, have you designed all fuel storage units, tanks and refuelling areas to be safe and secure and to prevent the risk of soil and groundwater contamination, in accordance with relevant legislation and industry guidelines?

A clear understanding of relevant legislation and guidance.

Storage facilities are constructed of suitable materials and are kept secure, dry and well ventilated.

Stores are located where they minimise risks to the environment during normal use and in foreseeable emergencies.

Storage does not have secondary containment

Where applicable, have all permanent, temporary and seasonal workers who handle or use fuel, fertilisers, plant protection products (PPPs) and other hazardous substances received effective instructions and training on their safe handling, use and application?

Training Checklist Example – Using PPP

Name of Employee or Contractor	Using PPP Correctly for all aspects of handling and application		
	Planned Date	Completed Date	Signature of Trainee

Training should highlight topics such as:

- Legal Aspects
- Agro-chemical use
- Agro-chemical storage
- Environmental aspects
- Safety aspects

Where applicable, have all permanent, temporary and seasonal workers who handle or use fuel, fertilisers, plant protection products (PPPs) and other hazardous substances been trained to deal with accidents or spills?

Training Record				
Everyone who uses or is in the close proximity of:	Have received training on procedures to deal with accidents and spills			
	Plant protection products	Fuels	Fertilizer	Training date
Name....				

First aid kit for minor injuries

Hazardous spill response kit

Eye wash facilities for emergencies

Are adequate changing and washing facilities provided to persons who handle or use fuel, fertilisers, plant protection products (PPPs) and other hazardous substances?

Eyewash station

Emergency Showers

Changing Facilities

Be able to show that the farm provides privacy, water and soap for workers to clean themselves in case of spillage, before meal breaks and at the end of the working shift.

Do you or your service provider have a preventative maintenance programme for the proper, efficient functioning of farm vehicles, equipment and machinery?

Be able to demonstrate that equipment and machinery are regularly serviced and well maintained.

Evidence may include up-to-date maintenance logs or schedules and date calibration certificate/ seals.

Equipment Maintenance Log

Equipment name	Type of maintenance			
	General maintenance	Date	Calibration	Date

Do you or your service provider ensure that relevant legislation or manufacturer guidelines for the calibration and servicing of plant protection product (PPP) and fertiliser application equipment are followed?

All application equipment is maintained in good working order and is safe to use.

The farm must be able to show that equipment manufacturers' recommendations are followed and there is a careful maintenance check at least annually by the farmer to ensure failing parts (valves, hoses, nozzles, motors) are replaced.

Can you demonstrate compliance with the handling, production and processing of approved genetically modified organisms (GMOs) on your land, in accordance with relevant legislation, seed company guidelines and client requirements?

Show that the farm has a clear understanding of:

- the laws and regulations for growing GMOs in the region of production
- the customer requirements

Show that the farm:

Holds all of the relevant permits and licences, including ensuring all varieties planted are approved for cultivation.

Demonstrate that:

- the farm keeps accurate records of all fields used for growing GMOs
- the farm communicates to direct clients about the GMO status of the supplied products

Do you take appropriate measures to prevent the risk of cross-contamination with conventional (non-GMO) material also grown on your land or in the wider community, in accordance with relevant legislation and seed company guidelines?

Have evidence that the farm maintains appropriate buffer zones between conventional and GMO crops.

Have evidence of how seeds, produce and grafted materials are handled, appropriately segregated and stored in accordance with any relevant legislation and given guidelines.

Where applicable, do you or your service provider make an informed choice on varietal selection that takes into consideration client requirements, climate and socio-economic and environmental factors?

Scoring Matrix: 1=negative, 2=neutral, 3=positive				
Criteria	Variety 1	Variety 2	Variety 3	Variety 4
Yield Performance				
Disease resistance				
Suitability to your climate conditions				
Suitability to your soil conditions				
Suitability customer requirements				
Fertilizer needs				
Water needs				
Cost				
Reliability				
Experience and known results				
Total				

Do you or your service provider ensure that your choice of seed or propagation material is a) of high quality and b) sourced from trustworthy sources?

Have a system in place to enable traceability back to the source of purchased planting/grafting materials and what quality indicators are considered.

Be able to provide written evidence to show the provenance of the crop being grown, which may be empty seed packages, plant passports, packing lists, invoices, etc.

Do you or your service provider keep records, including any applied treatment, certified status or phytosanitary certificates, of your own or imported seed or propagation material?

Record keeping template: imported seed and propagation material

Field no.	Name of crop	Variety Name	Variety vendor (variety source and batch number if applicable)	Location and date of planting	Quantity used per area	Copy of phytosanitary certificates and/or International Seed Analysis (ISTA) available	Records of purity & germination testing if it has been carried out on saved seed available	Remarks

Where applicable, do you or your service provider ensure that your choice of soil substrate is a) of high quality and b) from sustainable sources?

Substrate to be free of potential contamination and pathogens, and possess favourable and consistent characteristics, i.e. good moisture retention capacity, specified nutrient content and high organic matter content.

Where applicable, do you use any dedicated areas or structures to protect seedlings and plantlets during hardening?

Be able to show areas on the farm where seedlings are grown and hardened off.

Where applicable, do you take into account the optimum seed rate or plant spacing based on your local situation and crop choice?

Have a clear strategy for deciding upon the optimum seed rate/ plant population showing aims of optimising profitability whilst considering yield, quality, return on investment and environmental impact.

Where applicable, do you or your service provider take any measures to:

- Maintain crop cover?
- Increase organic matter?
- Protect and promote soil biodiversity?

Examples of options include:
Cover crops

Minimum tillage to preserve structure

Retain or return crop residues to the field to uphold long-term organic matter level in the soil.

Organic manure and compost application

Show the farm adopts practices to stimulate soil biological activity and thereby build up long-term soil productivity and health.

Where applicable, do you or your service provider take any measures to prevent or minimise:

- Soil disturbance?
- Air and waterborne soil erosion?
- Soil compaction?
- Poor drainage?

Minimise movement/traffic on land when it is wet and monitor movement/traffic to minimise compaction.

Using low pressure tires

Avoid using the same trails

Manage soil humidity by maintaining drains in wet climates and in dry conditions by soil moisture conservation practices

Have you or your service provider adopted any soil amendment measures to actively improve soil health?

The addition of amendments to the soil:

- Improve soil structure
- Increase the ability to absorb nutrients
- Make the soil more resilient to changes or shocks (such as heavy rain or drought)
- Increases the capacity for carbon sequestration
- Enables base cation saturation ratio (BCSR) optimisation

Examples of soil amendments include:

- Gypsum - improves aeration of heavy soils
- Lime or sulphur, pH optimisation

Where applicable, do you practice either a mixed cropping or crop rotation system on your land?

- Rotation of annual crops helps to improve soil structure and is an important part of an integrated pest management programme.
- The sequence of crops in a rotation should also be planned to avoid leaving soils unprotected at times of maximum rainfall or high winds, which can cause loss of top soil by erosion.
- For crop rotations, a farm should aim for a minimum of three species over a three-season cycle, ideally with one leguminous (nitrogen-fixing) crop.

Fallow grassland to break crop rotations

Crop rotation as an IPM tool

Do you or your service provider have a list of approved fertilisers, including their specifications and application methods, in accordance with specific crop needs?

Nutrient list					
Fertiliser or Manure	Source	Nutrient Content	Net weight	Heavy metal contaminants (if applicable)	Material safety sheet available (if applicable)
Name....					

Do you or your service provider keep fertiliser application records, in accordance with relevant legislation and industry guidelines?

Record keeping template								
Field no.	Name of crop	Application Date	Trade name/ Type	Composition (if known)	Quantity Kg/Acre	Method of Application	Operator name	Remarks

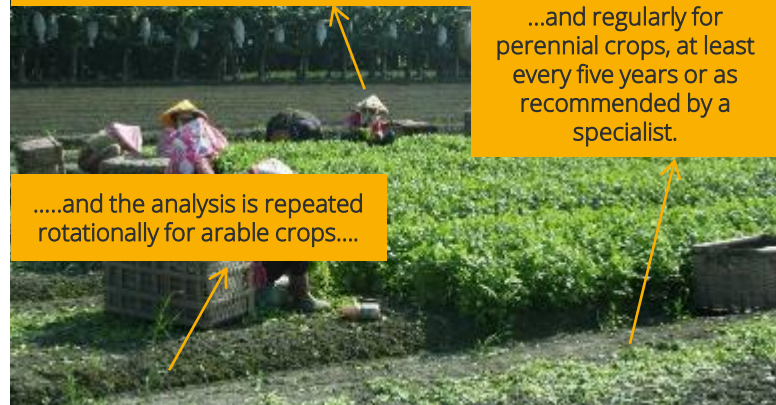

Do you or your service provider perform periodic soil sampling to monitor the changes in soil condition?

1. Soil samples are collected to give a representative sample (at least one per field) and sent for analysis of organic matter, extractable P, extractable K, pH and, where appropriate, exchangeable micro nutrients.

2. Soil analysis is done **before** planting new crops on a field....

...and regularly for perennial crops, at least every five years or as recommended by a specialist.

.....and the analysis is repeated rotationally for arable crops....

3. Records of soil sampling are kept and used to develop and then monitor nutrient management plans.

Do you have a nutrient management plan based on the principles of the 4 Rs:

- **R**ight Source
- **R**ight Rate
- **R**ight Time
- **R**ight Place

Nutrient Plan				
Crop and fertilizer application	Which fertilisers will be used	How much fertiliser should be applied	When should the fertiliser be applied?	How will the fertiliser be applied

Have you or your service provider adopted any on-farm measures to reduce your reliance on fertiliser inputs?

Some examples include:

Incorporation of nitrogen rich manures

Use of leguminous (nitrogen-fixing) crops, cover crops or companion cropping

Incorporation of crop residues

Use of trees in production areas

Do you or your service provider manage fertilisers in a safe and secure manner to prevent exposure and risk to people and the environment through proper:

Do you or your service provider only use plant protection products (PPPs) that are officially registered and permitted in your country for the respective crops?

Demonstrate how all plant protection products used are officially registered in country for use on the specific crop.

PPP Registration

Name of plant protection product

Country Registration

Do you or your service provider prevent the use of any plant protection products (PPPs) included in applicable international conventions as highlighted in:

- The SAI Platform Red List of Plant Protection Products?
- The SAI Platform Amber List of Plant Protection Products?

List of amber listed Plant Protection Products (PPP)			
Name of amber listed PPP	Justification for usage (they are essential for use or there is no viable alternative)	Explain how they can be reduced	Explain how they can be replaced

Where applicable, have you or your service provider incorporated any export or trading restrictions on the use of plant protection products (PPPs) required of you by the destination market or client respectively?

Demonstrate how you meet maximum residue levels legislation of destination markets where it differs from national MRLs.

List Plant Protection Products (PPP) and sources	
Name PPP	Source

Be able to show that PPPs are purchased from trustworthy and licenced sources.

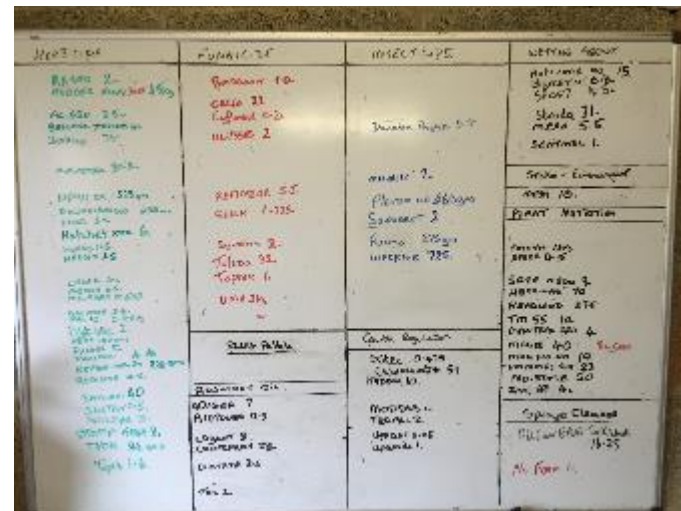

Do you or your service provider keep plant protection product (PPP) application records, in accordance with relevant legislation and industry guidelines?

Record keeping template: PPP Application record

Field no.	Crop	Application Date	Harvest interval	Trade name/ Type	Composition (if known)	Dosage /Acre Formul ation	Method of Applicati on	Target Pest

Do you or your service provider respect label recommendations based on:

- Appropriate pre-harvest intervals (PHIs)?

- Restricted entry intervals (REIs)?

- The timing and concentration of application?

- The maximum authorised rates of application?

Do you or your service provider take any measures to prevent the application of plant protection products (PPPs) to non-targeted crops, species and areas, including the wider community and environment, in accordance with relevant legislation and industry guidelines?

Buffer zones between crops and non-target areas

Do all spray handlers and operators receive appropriate and well-maintained personal protective equipment (PPE)?

Demonstrate that the PPE is clean of hazardous substances and in good condition

Demonstrate that appropriate PPE is readily available for all who need it

Ensure that workers are using them correctly

Where applicable, do you or your service provider manage plant protection products (PPPs) in a safe and secure manner to prevent exposure and risk to people and the environment through proper:

Mixing and Handling

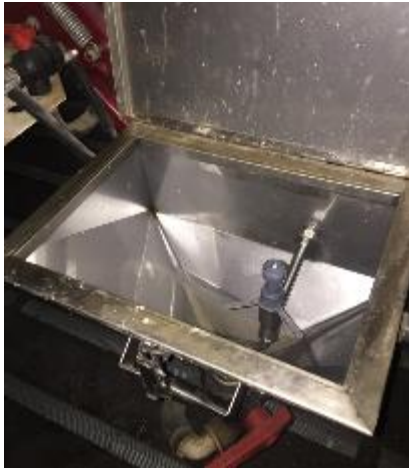

Storage

Labelling

Do you or your service provider safely clean equipment and empty containers, and store them in a manner to minimise the risk to people and the environment?

Triple rinse containers using the induction hopper or using a clean water after finishing your container

After rinsing the containers perforate them to prevent re-use

Ensure PPE and sprayer equipment is cleaned and stored safely after usage

Segregate agrochemical container waste from other waste and store carefully

Have you or your service provider implemented an Integrated Pest Management (IPM) plan based on:

- Relevant legislation, training or sound advice from a qualified source?
- Reducing chemical loading?
- Reducing weed, pest and disease resistance?
- Reducing adverse impact to people and the environment?

Reduce chemical loading by prevention, monitoring and control

Use cultural, biological, and mechanical strategies

Cultural methods include crop rotation, maintaining a healthy soil, use pest resistant varieties

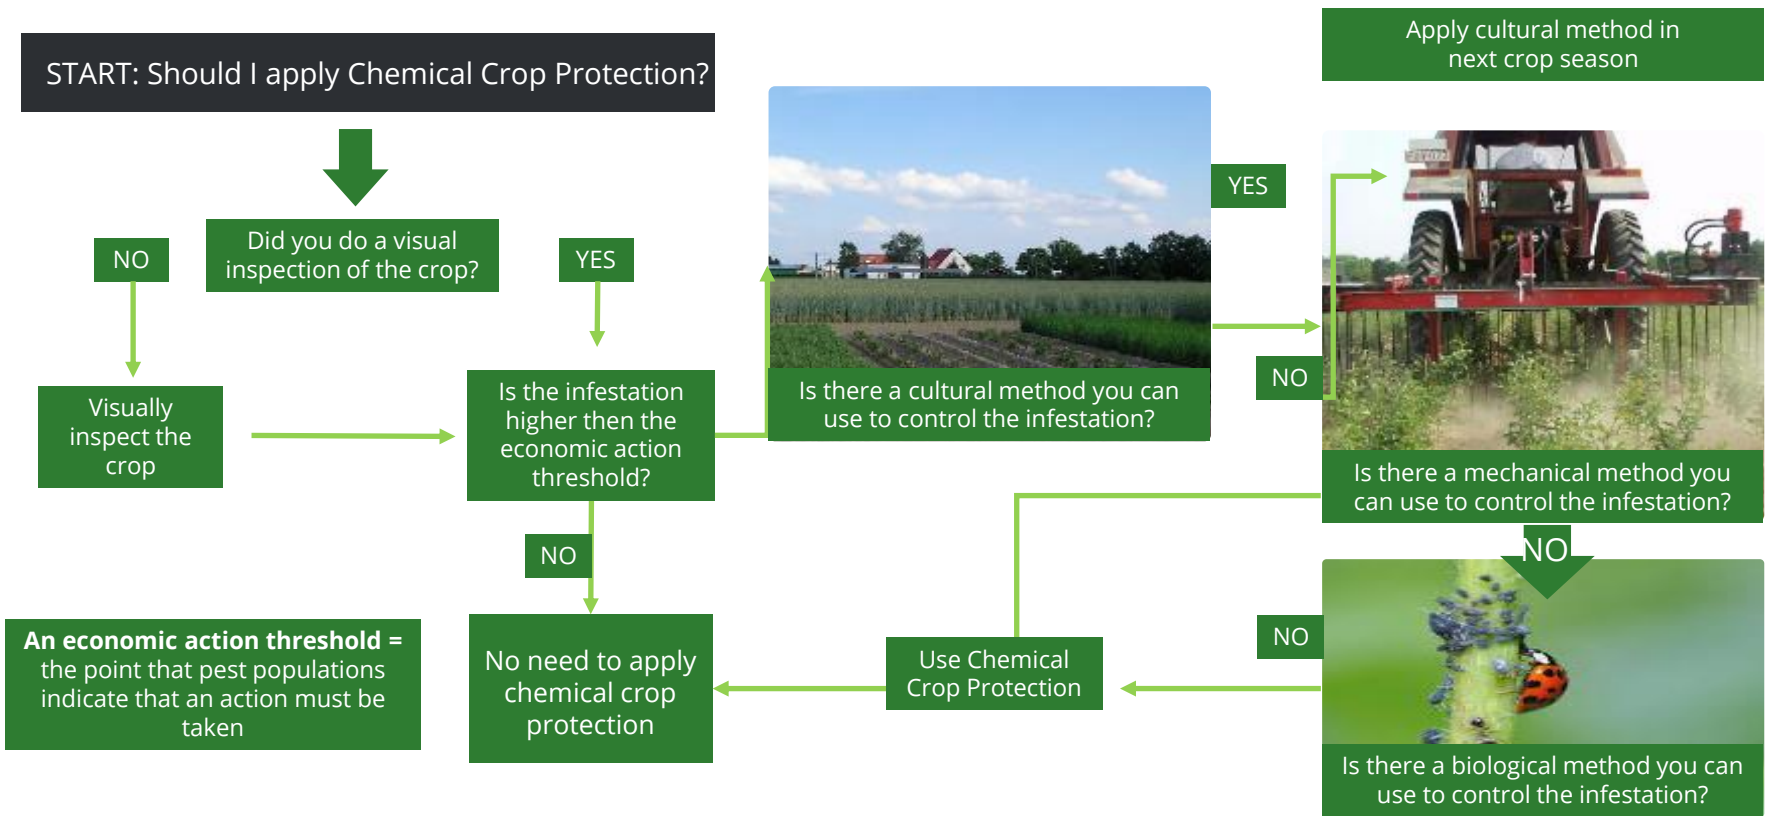

Biological methods include the use of natural predators, creating biodiversity habitats like beetle banks and field margins.

Mechanical methods include weeding, tillage and manual removal of pests

Is the use of plant protection products (PPPs) justified?

Do you or your service provider comply with relevant legislation for the safe and proper storage, transportation and disposal of a) waste material and b) hazardous substances and their containers?

On-site waste generation					
Type of waste	Process that generates it	Quantity	Potential hazards	How waste is handled	How waste is disposed of

Show that all waste storage facilities are assessed for risks

Do you reduce, reuse and recycle (non-crop) waste?

Examples

Buy feed in bulk direct from the supplier rather than in small bags. Then re-use old bags to feed livestock

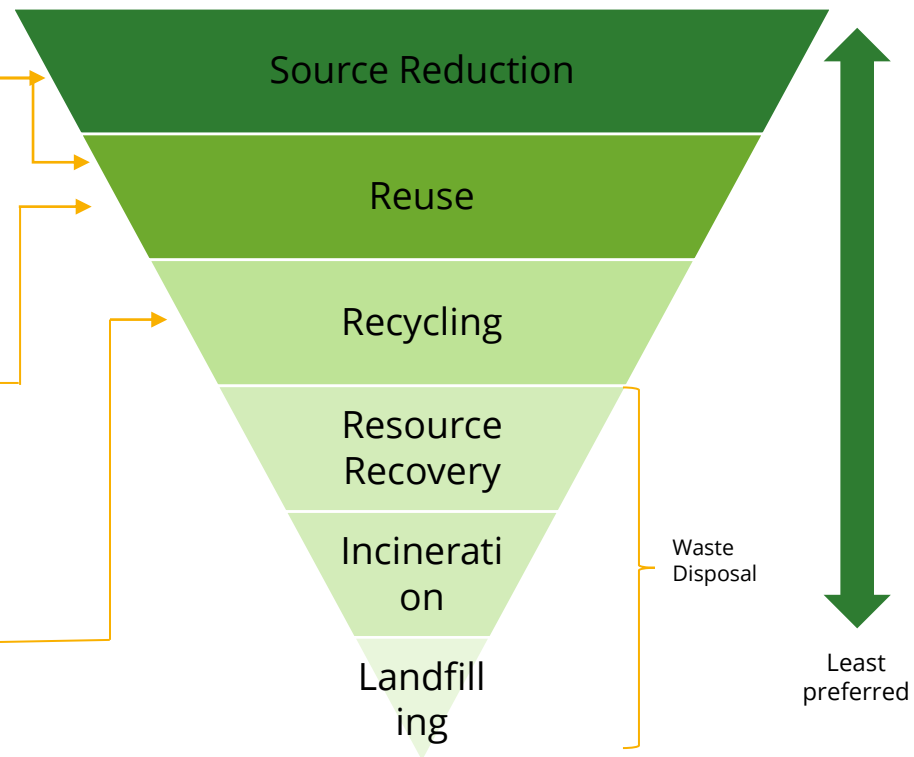

Compost organic debris on the farm (where no risk of disease transmission)

If you can not reduce or re-use - recycle other waste - for example - plastic

Solid Waste Management Approach

Do you avoid any crop, crop residue or product going to landfill?

Retaining stubble and crop residues helps hold the soil together and covers the surface with a water-permeable layer, helping reduce water flow and runoff, and provides a good source of carbon to help improve soil structure and nutrients as part of a nutrient management plan.

Do you take any measures to optimise rainwater use for your crop water needs?

Soil organic content is important for green water management. Show evidence of having adopted farming practices to improve moisture retention capacity of the soil and minimise runoff of rainwater.

Measures to optimise green water use include:

- | |
|--|
| Use of contouring or terracing |
| Avoid surface runoff |
| Improved infiltration |
| Improved moisture retention capacity |
| Use of buffer or grass strips |
| Use of ground cover, mulch or crop residue |
| Use of trees in production areas |

Where applicable, do you take any measures to harvest surplus rainwater or promote groundwater recharging?

Demonstrate any systems in place for collecting rainwater from roofs of farm buildings, which provides an alternative source of water, as well as potentially reducing the volume entering the slurry storage / effluent systems.

Where applicable, do you hold a valid water extraction licence?

Be aware of any legal requirements to hold permits for blue water use and show that you hold relevant extraction licences.

Where applicable, is the total and peak volume of water extracted within permitted legal limits?

Blue water use Amount	Date	Extraction limit

Does irrigation water quality comply with relevant legislation and industry guidelines?

Provide evidence of water quality analysis for all of the different water sources and, where necessary, any treatment required to bring it into compliance for crop water and soil requirements.		
Water source	Quality analysis done (date)	Treatment required y/n

Do you keep irrigation application records?

Irrigation Record template

Date of irrigation	Quantity of water used	Type of irrigation system used	Location of Use	Target Crop	Purpose of water	Source of water	Remarks

Do you have an irrigation management plan that optimises crop productivity and water use efficiency, based on:

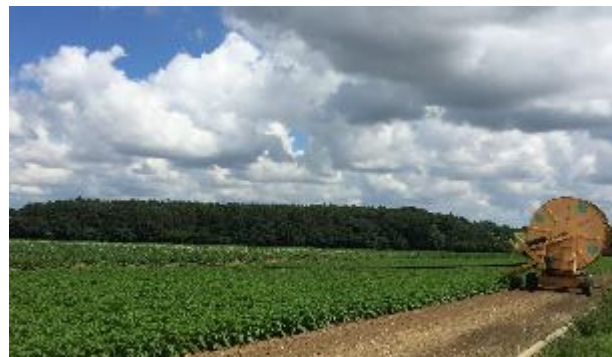

Crop Water Needs?

Irrigation equipment calibration and maintenance?

Water availability?

Duration and frequency of application?

Do you prevent soil or water pollution by managing all potential sources of wastewater runoff and discharge, in accordance with relevant legislation and industry guidelines?

Be able to demonstrate that the farm takes measures to protect surface and groundwater from direct pollution from wastewater.
Confirm where wastewater is generated on the farm, from which activities and processes.

Wastewater Source	Volume of wastewater generated	Where and how it is discharged	Options to manage wastewater

Where applicable, do you recycle greywater?

Where greywater is being recycled, show what treatment processes are in place, where necessary, and verify the recycled water

Volume	Intended use	Water quality test results

Examples of recycling include:

- Return to a nearby waterbody
- Irrigation of crops
- Water for poultry and livestock
- Washing vehicles, machinery and equipment
- Water for toilet cisterns
- Wetting dusty footpaths or roads

Do you prevent the use or discharge of untreated sewage, sludge or slurry onto land or watercourses, in accordance with relevant legislation and industry guidelines?

It is important that blackwater has been assessed and managed in accordance with relevant legislation and industry guidelines.

The different types of blackwater treatment include:

Septic tanks

Cess pools

Soil drain fields

Chemicals

Biodigesters

Composting toilets

Blackwater recycling systems

Where applicable, have you left all primary forest, mangrove, wetland, peatland, protected grassland and legal reserves in their original condition since 31.12.2015?

Provide historic and current aerial or satellite imagery that illustrates no primary forest, mangrove, wetland, peatland, protected grassland or legal reserve has been destroyed since 31.12.2015

Primary forest/wetland/peatland: Area that shows no or minimal disturbance by people and/or demonstrates the diversity, structure and ecological services of a mature forest etc. for that region. Natural disturbances like natural fires or windstorms do not convert primary forest etc. into secondary forest etc.

Where applicable, do you have the necessary legal permits for any cleared grassland or deforested secondary forest, or to farm adjacent to or in protected areas, in accordance with relevant legislation and customary laws?

Ensure that valid and uncontested legal land titles for the certified farm area are available and provide legal evidence that the planned or past land-conversion into agricultural land is officially approved.

Have you taken any measures to protect and promote natural habitat on your land, especially areas adjacent to watercourses and protected areas?

Natural buffer zones (NBZs) should consist of permanent native vegetation with trees, bushes or other types of plants in order to promote biodiversity,

Are field margins, boundaries and watercourses managed with limited and timely intervention?

Field margins and boundaries are managed with minimal and appropriate use of fertiliser or plant protection products (PPPs).

Traffic on field margins and boundaries should be kept to a minimum.

Grass verges and strips should not be cut during flowering and cut as infrequently as possible

Ditches and drains should not be reprofiled during bird nesting periods and only undertaken on one side or limited sections in a given year.

Have you restored areas of low productivity to natural habitat?

Restoration of vegetation is encouraged in degraded areas that have been prone to soil erosion or loss of fertility, preferably by using native species.

Compensation is with an equal ecological value, preferably confirmed by an independent expert report. This could include a larger area to be planted with mixed native species or establishment of critical wildlife corridors.

Do you have a plan in place to create a healthy ecosystem by protecting and promoting the following:

The farm manages and creates habitats as part of a BAP by planting and managing a mixed population of native herbaceous, bush and tree species to create habitats of high biodiversity value.

- Beneficial species of flora and fauna?

Have a written, up-to-date biodiversity action plan (BAP) to promote biodiversity on the farm and show progress is being made to implement the plan.

- Native species?

Manage any areas where beneficial species of flora and fauna can be found to promote their existence.

- Rare, threatened and endangered species?

Carry out assessments and record the presence of rare or endangered species and habitats on the farm and within the local area.

Do you take any measures to prevent the illegal hunting, fishing and extraction of flora and fauna on your land, including rare, threatened and endangered species, in accordance with relevant legislation and customary laws?

Communication on hunting, fishing and extraction of flora and fauna		
Identification of on farm rare and endangered species (plant and animal)	Training and awareness	Topic
Staff and workers		.
Community		
Hunters		

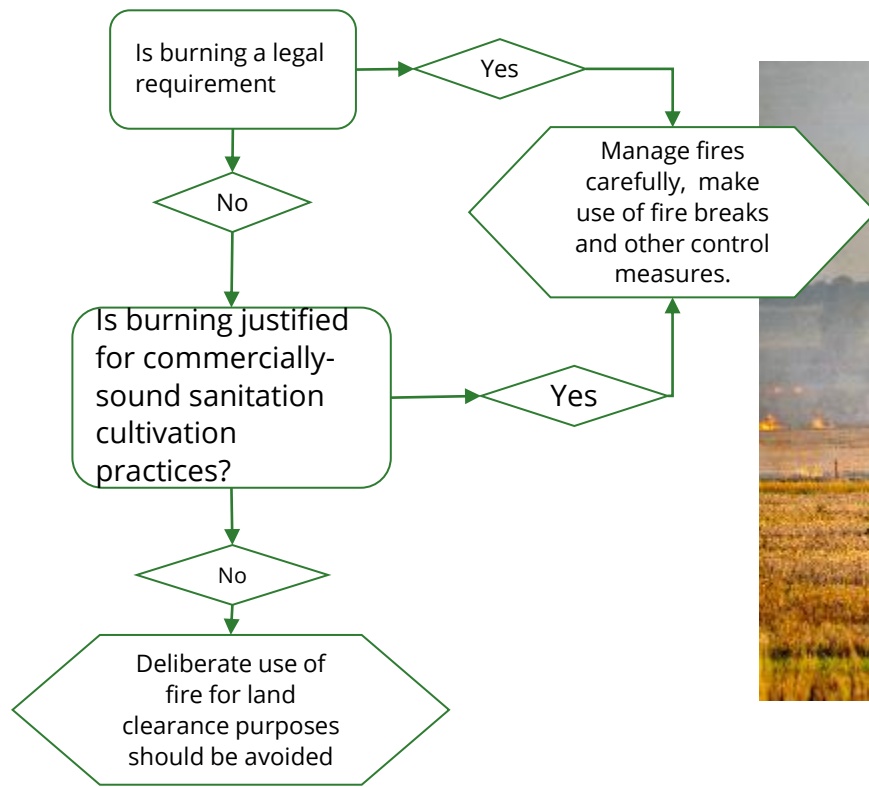

Do you avoid the deliberate introduction, cultivation and use of known invasive species?

Show that you have carried out an assessment of plants growing on your farm to determine the presence of any invasive species and that you are aware of potential impact to your farm, the local environment and the community.

Where applicable, do you avoid the deliberate use of fire for land clearance purposes?

Where applicable, have you taken any measures to prevent or mitigate air pollution, in accordance with relevant legislation and industry guidelines?

Risk Assessment of activities that are possible sources of air pollution			
Activity	Indicate the risk (1-5) to the environment and human health	For high risks: indicate how air quality is monitored	What measures are taken to avoid, reduce or remedy the causes of air pollution

Manure storage

Pesticide application

Dust from Harvest

Burning Waste

For your farming operations, have you:

- Listed your energy sources and quantified your energy needs?

- Taken any measures to optimise energy use efficiency?

Energy Checklist			
Farm Activities that require energy	Energy Source	Energy Needs	Potential measures to optimize energy uses

Have you identified and sourced any clean and sustainable sources of renewable energy for your farming operations?

Energy Checklist

Farm Activities that require energy	Current Energy Source	Renewable alternative source	Remark

Do you measure and monitor all of your sources of greenhouse (GHG) emissions?

Greenhouse gas emissions include any gases that contribute to the 'greenhouse effect', including carbon dioxide, nitrous oxide and methane.

Processes related to greenhouse gas emissions

Type	Existing on farm
Fertilizer use	
Soil Management	
Energy use	
Transport	

Do you or your recruitment agency ensure that all permanent, temporary and seasonal workers have a legal right to work?

The farm or its recruitment agency must show how all permanent, temporary and seasonal workers have a legal right to work.

Copies of any legally required documents such as a passport, ID, right to work documentation, work permits, etc. are kept on farm or, where applicable, by the recruitment agency.

Original documents are not permitted to be withheld.

Recruitment agencies need an official licence to operate.

Do you or your recruitment agency ensure that you are not using any form of forced or bonded labour, in accordance with relevant legislation and ILO Conventions?

Business Ethics & Integrity

The farm (or its recruiting agency or labour provider if relevant) does not charge workers fees for the job they are offered that require him or her to be in debt to the farm (or agency), or to be compelled to work for the farm (or recruiting agency) or prevented from leaving solely to pay off the debt.

The farm does not withhold any part of any worker's salary, benefits, property or documents (e.g. identity cards and travel documents) in order to force such workers to continue working for them.

Workers are allowed to leave the farm's premises at the end of their shifts.

The farm (or its recruiting agency if relevant) does not participate in, or allow human trafficking or any other form of Modern Slavery.

Do you ensure that you or any recruitment agencies supplying you with labour do not charge workers a) recruitment fees or b) any other related costs associated with labour provision, in accordance with relevant legislation and ILO Conventions?

Provide evidence of a written contract and documented oversight mechanisms in place to ensure the labour provider is:

Compliant with applicable legal requirements and, if available, licenced or certified by the competent national authority,

Not engaged in fraudulent or coercive recruiting practices,

Compliant with all worker related requirements, and

All recruitment fees are paid by the farm, not by workers.

Do you a) inform permanent, temporary and seasonal workers, as well as contractors, of their legal rights and obligations, and b) establish working contracts or relationships, in accordance with relevant legislation and ILO Conventions?

Minimum Requirement

Be aware of and demonstrate compliance with national laws, collective agreements and the provisions of the relevant ILO Conventions with respect to worker welfare, employment rights and how you apply this across the farm business.

Do you ensure that all permanent, temporary and seasonal workers are subject to the same working conditions and

- a) have access to the same opportunities,
- b) receive equivalent pay for similar tasks and abilities, and
- c) are treated equally with respect to training, recruitment and disciplinary procedures regardless of their race, religion, disability, gender or sexual orientation?

Do you ensure that permanent, temporary and seasonal workers do not exceed the maximum number of a) working hours per day and b) consecutive working days, in accordance with relevant legislation and ILO Conventions?

Minimum Requirement

The farm has clear policies and procedures stating permanent, temporary and seasonal workers are not required to work more than the regular and overtime hours in accordance with national laws, collective agreements and the provisions of the relevant ILO Conventions.

In the absence of applicable laws or collective agreements, normal working hours shall not on a regular basis exceed a maximum of 48 hours per working week, or 60 hours per working week including overtime, and employees shall be allowed at least one day of rest in every seven-day period.

Do you ensure that permanent, temporary and seasonal workers are provided with adequate breaks and provision of a) potable water, b) shade, and c) sanitation during their shift, in accordance with relevant legislation, ILO Conventions or, in their absence, industry guidelines?

Provide potable water

Provide sanitary facilities in the field

Provide shade during breaks

Do you ensure that overtime work is

- a) voluntary, and
- b) compensated, in accordance with relevant legislation and ILO Conventions?

Show clear policies for deciding on overtime and securing worker consent.

Be able to present evidence showing all overtime is on a voluntary basis and fairly remunerated.

Do you ensure that wages and benefits of permanent, temporary and seasonal workers are a) paid regularly and b) meet the minimum required by relevant legislation or, in its absence, industry guidelines?

Minimum Requirement

Have a farm policy and be able to present evidence that shows all workers are provided in a timely manner with a total compensation package that includes

- wages,
- overtime payments,
- benefits and
- paid leave.

The package should meet or exceed the legal minimum standards/ appropriate prevailing industry standards, whichever is higher, and any terms established by legally binding collective bargaining agreements.

Are any deductions from wages a) legally permitted, b) clearly recorded and communicated to workers, and c) never made for disciplinary purposes?

Minimum Requirement

- All deductions are clearly shown and legally-mandated.
- Ensure all other deductions from wages are made:
 - only with the express and written consent of the worker
 - and there are no illegal/ excessive deductions or fees for items such as deposits for accommodation, tools or personal protective equipment.

Where applicable, do permanent, temporary and seasonal workers receive a) paid vacation, b) parental leave, and c) sickness benefit, in accordance with relevant legislation and ILO Conventions?

Minimum Requirement

Have a clear policy on the various types of leave in accordance with national laws, collective agreements and the provisions of the relevant ILO Conventions and provide evidence to show how the policy has been applied on the farm.

Do you pay all of your permanent, temporary and seasonal workers the equivalent of a living wage?

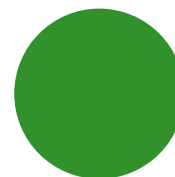

Minimum Requirement

The farm ensures compensation terms are established by legally binding collective bargaining agreements and all permanent, temporary and seasonal workers are paid a fair wage that is equal to, or above, the national legal minimum standard or in accordance with appropriate industry standards, whichever is higher.

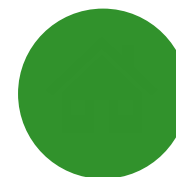

Living wage is defined as the remuneration received for a standard work week by a worker in a particular place sufficient to afford a decent standard of living for the worker and his or her family. Elements of a decent standard of living include

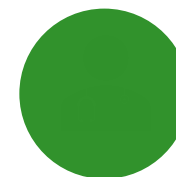

LIVING
WAGE

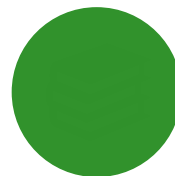

FOOD

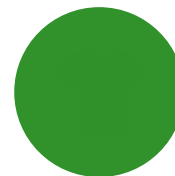

Shelter

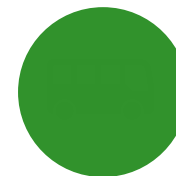

HEALTHCARE

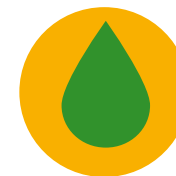

EDUCATION

CLOTHES

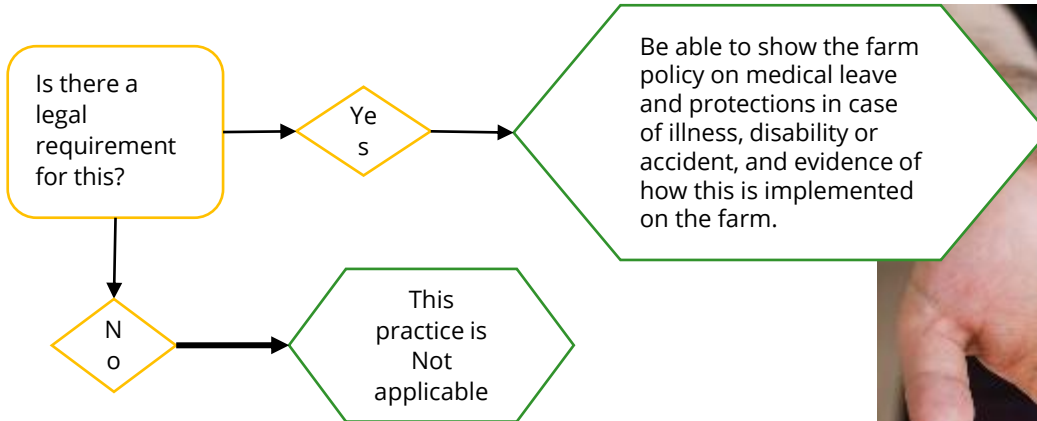

TRANSPORT

Clean Water

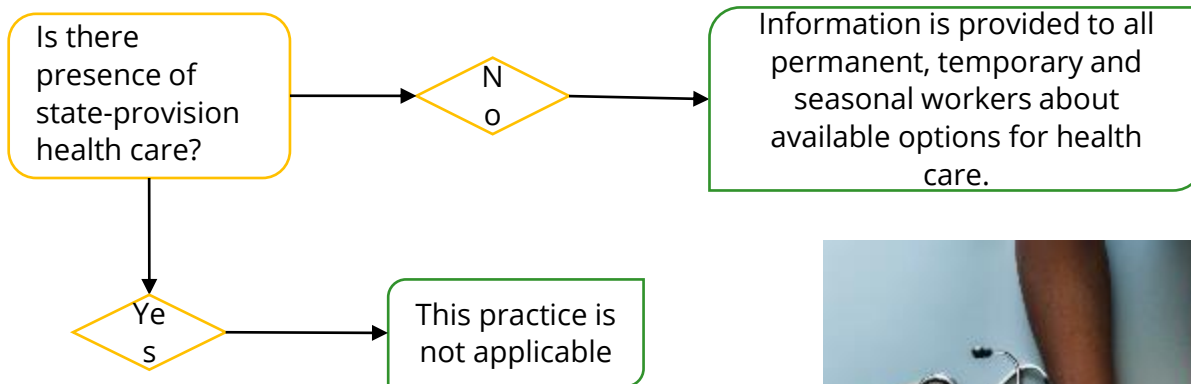

Where applicable, are permanent, temporary and seasonal workers compensated for any accident or illness due to work-related activities, in accordance with relevant legislation?

Where applicable, do you advise or financially support your permanent, temporary and seasonal workers on the availability of health insurance?

Health insurance can include:

- long term compensation in case of disability
- Payment of medical costs

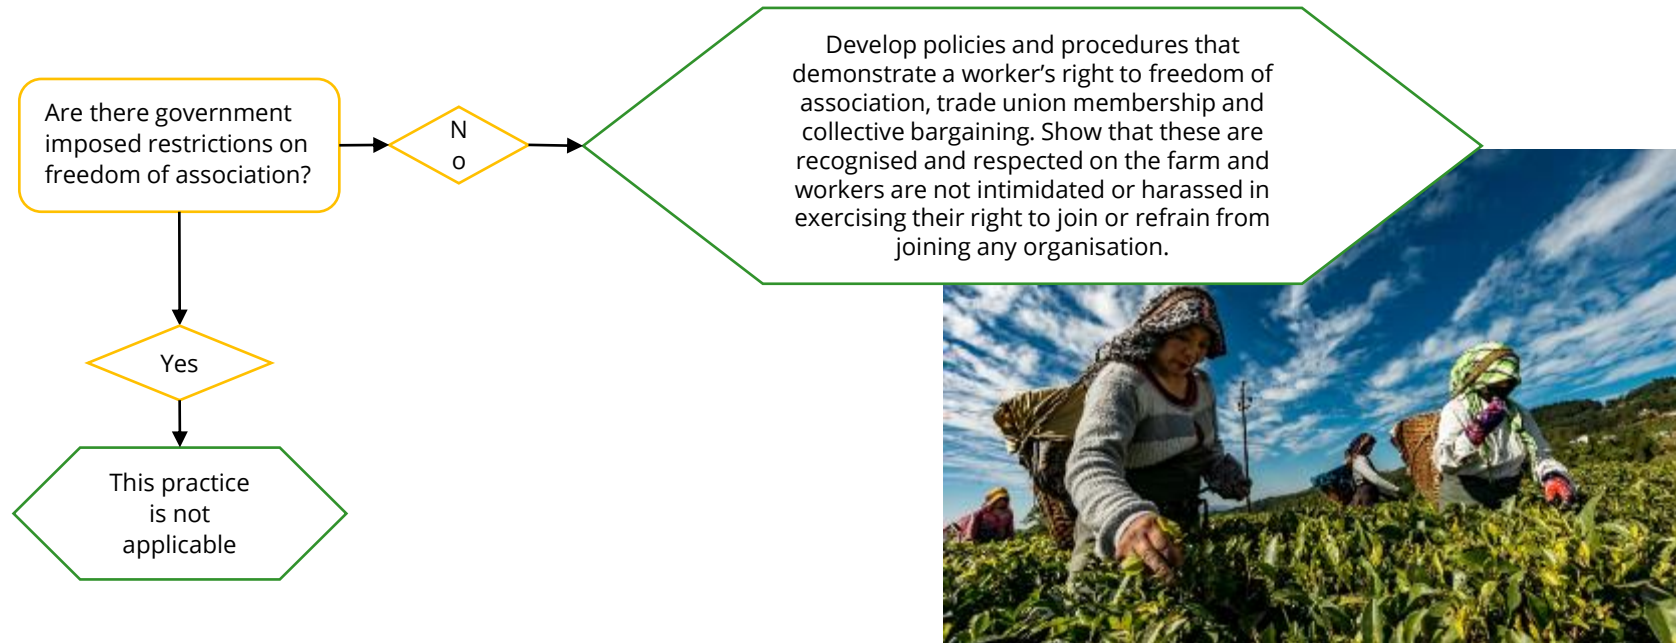

Support may include:

- Creating awareness about available insurance
- Providing information about available insurance
- Subsidising the costs, either wholly or partly of insurance

Where applicable, do you allow permanent, temporary and seasonal workers the right to establish, join or actively participate in an association of their choice, in accordance with relevant legislation and ILO Conventions?

What is Freedom of Association?

Freedom of association means that employees have the right to establish and to join organisations of their own choosing without any prior authorisation or interference.

Where applicable, do you a) allow the effective functioning of labour organisations and b) permit permanent, temporary and seasonal workers the right to engage with workers' representatives without any opposition, in accordance with relevant legislation and ILO Conventions?

Worker representatives are able to talk to employees and have reasonable access to company facilities and documents required to fulfil their duties.

Ensure that a worker's choice to form, or join, a trade union will not compromise their equal treatment at work.

This is N/A if labour organisations do not exist for your industry.

Have you established a positive work environment in which permanent, temporary and seasonal workers can freely practice their religion and fulfil their needs based on culture, race, disability, gender and sexual orientation?

Have clear policies and procedures and be able to show:

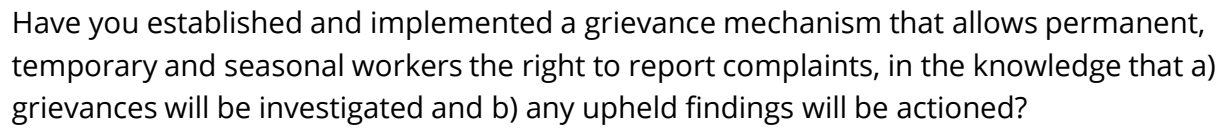

All permanent, temporary and seasonal workers are treated fairly, with respect and dignity.

The farm prohibits any kind of harassment, intimidation, bullying or abuse, including the threat of physical punishment or disciplinary action.

No worker is discriminated against in any aspect of employment.

All permanent, temporary and seasonal workers have the right to freely practice their religion or fulfil needs relating to cultural background, disability, gender or sexual orientation..

Do you provide relevant training for all permanent, temporary and seasonal labour?

Training Checklist

Topic Covered	Name of the Trainer	Date	Attendees

Where applicable, do you take into account language and cultural barriers when it comes to worker training and communication?

Where workers have poor reading skills or do not read the local language, have a system in place so information is provided in such a way that it is understood by all workers.

PLEASE REMOVE GLOVES BEFORE ENTERING THE TOILET	SI PREGA DI RIMUOVERE I GUANTI PRIMA DI ENTRARE A FAR USO DEI SERVIZI IGIENICI
DO NOT THROW GLOVES IN THE TOILET OR THE SANITARY BINS - USE RUBBISH BINS PROVIDED	NON GETTARE I GUANTI NEI SERVIZI IGIENICI O NEI CESTINI PER TALE USO. USA L'APPOSTO CESTINO

PROSZĘ ZDJĄĆ REKAWICE PRZED WEJŚCIEM DO TOALETY	LEGYSZIVES VEDO LE A HESZTYUT MIELOTT BEMESZ A WC - BE
NIE WRZUCĄĆ REKAWIC DO TOALETY LUB POJEMNIKÓW SANITARNYCH - DO TEGO CELU UŻYWAĆ ZWYKŁYCH KOSZY NA ŚMIECI	NIE DOBĄ A KESZTYUT A WC - BEN LEVO KUKABA. HASZNALD A MEGFELOT
THANK YOU	

Improve communication in the local language by organising local language lessons

Warning signs, safety procedures and other important communications are developed in such way that they are **developed** and **understood** by all workers.

Example of Best Practice

Do you prohibit the employment of minors as permanent, temporary or seasonal workers, in accordance with relevant legislation and ILO Conventions?

A child is a person under 15 years of age.

There are two exceptions to this definition

1. Where the local minimum age, under the law, for work or compulsory education is higher. In these cases, the higher age is applicable.
2. Where the local law sets a minimum age of 14 in accordance with developing-country exceptions under ILO Convention 138. In this case the lower age will apply.

Do you ensure that any minors employed do not conduct hazardous work or any work that jeopardises their physical, mental or moral well-being, in accordance with relevant legislation and ILO Conventions?

Have a policy clearly stating that

individuals under the age of 18 are not allowed to carry out work in dangerous or unhealthy conditions that could result in death, injury or illness and be able to provide evidence to show the application of the policy.

This protection should also preclude them from certain types of work, such as working with hazardous materials or working at night.

working in dangerous locations, in unhealthy situations, at night, or with dangerous substances or equipment, and carrying heavy loads.

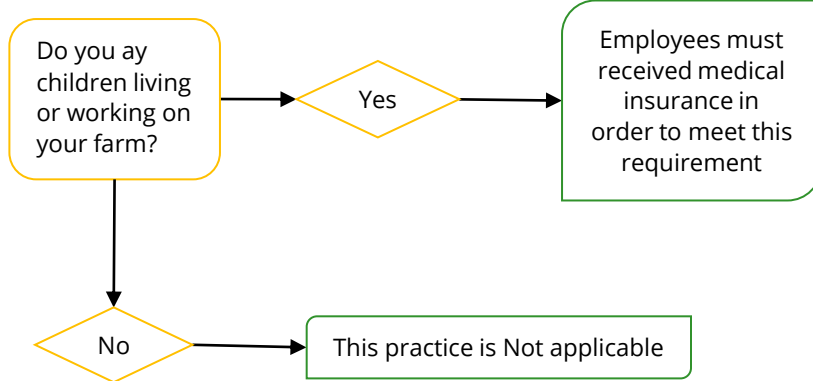

Don'ts Ignore leakages Store in open containers
Store near watercourses/sources

Do you ensure that all minors living or working on the farm can go to school or receive home schooling?

When young workers are employed it is important to promote their development by allowing them access to education,

whether this is attending school or receiving schooling at home as part of a recognised programme.

Have you a) identified risks associated with your activities and b) implemented remedial actions to safeguard the health and safety of all permanent, temporary and seasonal workers, contractors, visitors and the community?

Risk Assessment

Step-1

Walk around the farm and identify all the health and safety risks for you and your workers.

Describe the risk

Step-2

Step-3

Describe the action to prevent or handle the potential situation

Example of health and safety risk assessment and actions

Description of the risk	Description of preventive action
<i>Workers get injured during harvesting for working with sharp objects</i>	- Organize training to safely handle equipment - Have an emergency plan in case an accident happens
<i>Agrochemical Storage is accessed by unauthorized people</i>	- Put warning signs - Lock the storage
<i>Machinery breaks down during operations</i>	Frequently maintain machinery
<i>Fire</i>	Install fire equipment at high risk areas
<i>Agrochemical applications</i>	Have PPE available for all workers

HAZARDS

ACTIONS

Do you organise regular Occupational Health & Safety (OHS) training for all permanent, temporary and seasonal workers?

Training Checklist				
Health & safety Training Topics	Training Information			
	Training Content	Date of Training	Participants list	Trainer Name & Signature
First Aid	- Basic Skills - First Aider numbers			
General Safe Working	- Working at height - Heavy lifting			
Emergency procedures	- Plan - Contact Numbers - Evacuation points			
Using fertilizer and chemicals	- PPE usage - Equipment Dos and Don'ts			
Handling hazardous waste	- Rinsing - Collection points and segregation - PPE			
Using Machinery	Common Hazards			

Training is at least held once per year or before new work activities begin, and meet legal requirements.

Do you ensure a) adequate first aid supplies and b) the presence of someone with first aid skills on the farm at all times?

The image shows a printed form titled "EMERGENCY TELEPHONE CONTACTS" with a header logo that says "DAIRY LIFE". The form is divided into several sections with red borders, each containing fields for contact information. The sections include:

- EMERGENCY TELEPHONE CONTACTS**: A header section with a logo and text.
- EMERGENCY CONTACTS**: A section for listing emergency contacts, including names, phone numbers, and addresses.
- EMERGENCY SERVICES**: A section for listing emergency services, including names, phone numbers, and addresses.
- EMERGENCY SUPPLIES**: A section for listing emergency supplies, including names, quantities, and locations.
- EMERGENCY PERSONNEL**: A section for listing emergency personnel, including names, titles, and contact information.

Have provision for first aid training and first aid kits in the workplace

Be able to show that workers have access to someone adequately trained in first aid and first aid kits stocked in accordance with:

Do you ensure that injured or ill workers do not continue performing any activities that are detrimental to their health and safety or that of other workers?

Minimum Requirement

- Have a return to work policy after injury or illness so workers do not put themselves, the safety of colleagues or food safety at risk. Have a return to work policy after injury or illness so workers do not put themselves, the safety of colleagues or food safety at risk.
- Be able to show evidence of how this is applied on the farm, possibly as part of the workers' records.

Do you ensure that a) all accidents are reported and recorded and b) appropriate medical treatment was received?

Accident Record

Details of Accident	Date of Accident	Reason	Corrective Action
<i>Fall from ladder in silage shed whilst lining with black plastic</i>	<i>17th May 18</i>	<i>Ladder slipped</i>	<i>Always ensure that you have a person to hold the ladder at the base</i>

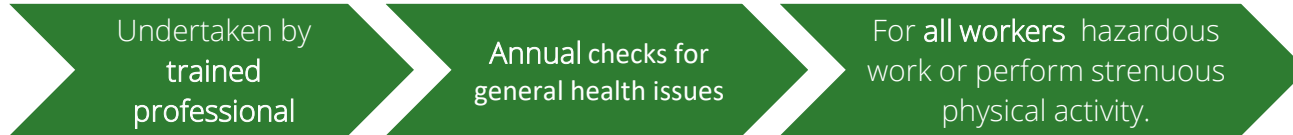

Reporting can be verbal, however documentation of accidents and corrective action is encouraged.

Do you provide medical screening for all permanent, temporary and seasonal workers that have a higher risk of disease or health-related issues due to environmental factors or the nature of their work?

Medical Checks should be:

Important: Non-job-related medical testing as a condition of employment (except lawful drug test) is **prohibited**.

Are emergency contact details available and easily accessible at the farm to meet all reasonably foreseeable emergency medical situations?

Emergency contact details shall be provided in all respective languages used to communicate to and by permanent, temporary and seasonal workers and, where possible, using large, visible signage strategically displayed in key positions around the farm and in farm vehicles.

Where applicable, do you ensure that all permanent, temporary and seasonal workers who may be vulnerable or whose immune systems may be compromised do not handle plant protection products (PPPs) or hazardous substances?

Farm policy should clearly state that:

- Individuals under the age of 18
- People suffering from chronic or respiratory diseases
- Pregnant/ nursing women

are not allowed to carry out work in dangerous or unhealthy conditions that could result in death, injury or illness

This protection should preclude them from working with hazardous materials, and worker records should clearly show to whom the policy is applicable.

Do you ensure access to water, sanitation and hygiene (WASH) facilities for all permanent, temporary and seasonal workers and their families, visitors and subcontractors on the farm?

Be able to show that permanent, temporary and seasonal workers and their families, visitors and subcontractors have access to:

Hygiene facilities

Sanitation

Clean drinking water available in the field

Where applicable, do you provide all permanent, temporary and seasonal workers and their families a) access to appropriate cooking facilities and b) clean, safe accommodation and sanitation?

On-farm living quarters offered to permanent, temporary and seasonal workers:

Are habitable and structurally safe,

Have provision for hygienic food storage and preparation,

And have the basic services of drinking water, toilets, and drains

In the case of no drains, septic pits can be accepted if compliant with local regulations.

Cooking facilities

Natural light

Be comfortable to live in

Washing facilities

Do you adopt any measures to a) promote personal hygiene and b) prevent diseases?

Show that there is a training policy to educate all permanent, temporary and seasonal workers of

The importance of good hygiene in preventing the spread of disease between colleagues and preventing the contamination of harvested crops.

Worker training records will provide evidence of the training given, the topics covered and the course trainer.
